THE RESTLESS FOUNDER / FREE GUIDE

The Superpower Kit

Ten ADHD strengths, and the one AI move that turns each into finished work.

A strength with no system is just a feeling. Give it a handle.

A strength needs a handle.

Hyper focus, creative thinking, fast adaptation, curiosity. People talk about them as superpowers, and sometimes they are. But a strength with no system drifts, and the work it could have made never lands.

This kit pairs each of ten strengths with one AI move that turns it into something finished. You do not need all ten. Pick the three you recognise, and use them this week.

The pattern

The strength starts the work. AI holds the plan, the structure and the finish.

The rule

Use the strength where it is strongest. Hand the rest to AI.

Not every strength shows up every day. Build for the day it does.

Focus, ideas, adapting, curious.

1. HYPER FOCUS

I am about to spend a long focus session on [task]. Write me a one line finish point so I know when to stop, a list of what to skip, and a reminder to eat and drink every ninety minutes.

2. CREATIVE THINKING

Here are my raw ideas: [paste]. Group them, name the three with the most pull, and for each give me the smallest version I could make this week.

3. FAST ADAPTATION

Plans have changed: [describe]. Rebuild my week around what is now true, keep the one thing that matters most, and tell me what to let go.

4. ENDLESS CURIOSITY

I went down a rabbit hole on [topic]. Summarise what I learned in five lines, tell me the one thing worth acting on, and park the rest in a list called Later.

Rules, patterns, learning.

5. RULE BREAKING INNOVATION

Here is how everyone in my field does [thing]: [describe]. List the unwritten rules, then give me three ways to break one of them that a customer would actually enjoy.

6. PATTERN RECOGNITION

Here is a messy set of notes, numbers or messages: [paste]. Tell me what repeats, what is the odd one out, and what I would probably miss.

7. RAPID LEARNING

Teach me [subject] in ten minutes. Start with the three ideas everything else hangs on, then test me with five questions, one at a time, and correct me kindly.

Tip: ask AI to keep what you learn in a running note, so next month you build on it instead of starting again.

Energy, vision, difference.

8. HIGH ENERGY

I have a burst of energy today. Here is my list: [paste]. Put the hardest, most important item first, batch the small ones for after, and tell me what to do when the energy dips.

9. BIG PICTURE VISION

Here is the big picture I can see: [describe]. Break it into five stages, name the first concrete step for each, and show me which one to start this week.

10. UNCONVENTIONAL THINKING

Here is the problem: [describe]. Give me the standard answer, then three answers nobody in my industry would give, and the risk of each in one line.

Three things, in order.

1 **Today:** circle the three strengths you recognise. Paste the matching prompt for one of them.

2 **This week:** use each one once, on real work, and keep what came out.

3 **Friday:** ask AI which prompt did the most for you and keep that one open.

The plan lives in the chat. The spark stays with you. That is the whole kit.

Not medical advice. Everyone's experience differs. Change the words until they sound like you.

The strength is yours. The system just keeps hold of it.
